Interstate 29/35 Connections Project

kcICON Project Team Conserves, Recycles

The kcICON Project team strives daily to conserve natural resources and care for our environment in the following ways:

- ✓ Used ProjectWise Explorer computer software to facilitate a paperless project procurement.
- ✓ Use Centric Project computer software for paperless communication and document sharing/archiving.
- ✓ Mitigate traffic congestion on the I-29/35 corridor by providing additional funding to the Kansas City Area Transportation Authority to increase capacity on its #42 North Oak transit route.
- ✓ Will recycle 36,000 tons of material including concrete for fill material and more than 6,000 tons of the existing Paseo Bridge.
- ✓ Will reuse existing sign trusses, drainage inlets and manhole covers.
- ✓ Will install energy-efficient LED panels for nighttime river bridge aesthetic lighting. Each panel will last for about 50,000 hours before needing to be replaced.
